Goleta Sanitary District Fairview Avenue/San Pedro Creek Sewer Line Relocation

Prop 50 Funding

In a competitive grant for Integrated Regional Water Management monies under Proposition 50, the Goleta Sanitary District (GSD) was awarded \$1.5 million by the State Water Resources Control Board for the Fairview Avenue/San Pedro Creek Sewer Line Relocation.

Fairview Avenue/San Pedro Creek Sewer Line Relocation

The project includes construction of approximately two hundred and eighty (280) linear feet of approximately thirty-six (36) inch diameter and approximately three thousand and two hundred (3,200) linear feet of approximately thirty (30) inch diameter plastic trunk sewer pipe. The pipe placement is along the same alignment as an existing smaller diameter sewer line located on the easterly side of South Fairview Avenue Right-of-Way between Hollister Avenue and Fowler Road. The existing twenty-four (24) inch sewer pipe along the westerly side of South Fairview Avenue, which also parallels San Pedro Creek, is being abandoned in place. Other than removing the tops of the existing manholes, there will be no disturbance to San Pedro Creek or construction equipment within the top of the bank. The project includes trenchless rehabilitation of approximately forty-nine (49) linear feet of approximately thirty (30) inch diameter sewer pipeline, approximately seven (7) linear feet of approximately eighteen (18) inch diameter sewer pipeline, and approximately two thousand two hundred and twenty-seven (2,227) linear feet of approximately fifteen (15) inch diameter sewer pipeline; and rehabilitation of approximately thirteen (13) manholes.

Need for the Project

The length of sewer line being replaced along Fairview Avenue has a relatively high volume of inflow and infiltration of storm water into the sewer system, which is eliminated by replacing this sewer line. The new location is to be located away from a tributary to Goleta Slough which is an environmentally sensitive area and a Critical Coastal Area.

Project Benefits

The replacement of this sewer line reduces inflow and infiltration of storm water that results in increased capacity for conveyance and treatment of sewage downstream, reducing sewer line surcharges and needs for increased capacity. The project reduces and/or eliminates the sanitary sewer overflows that have the potential to directly impact waters of the state. This project helps to protect the environmentally sensitive Goleta Slough, a Critical Coastal Area, and enhance recreational activities at the Goleta Beach County Park, whose recreational activities include swimming, fishing, boating, and scuba diving.
