Summary of Water Production and Use Data

Each year, water purveyors in California who meet the definition of “Public Water System” are required to submit to CA Department of Water Resources a “Public Water System Statistics” form for the previous calendar year. For many years, the Santa Barbara County Water Agency has asked our local purveyors to send us a copy of the form so we can prepare summary information for the eighteen water purveyors within the county.

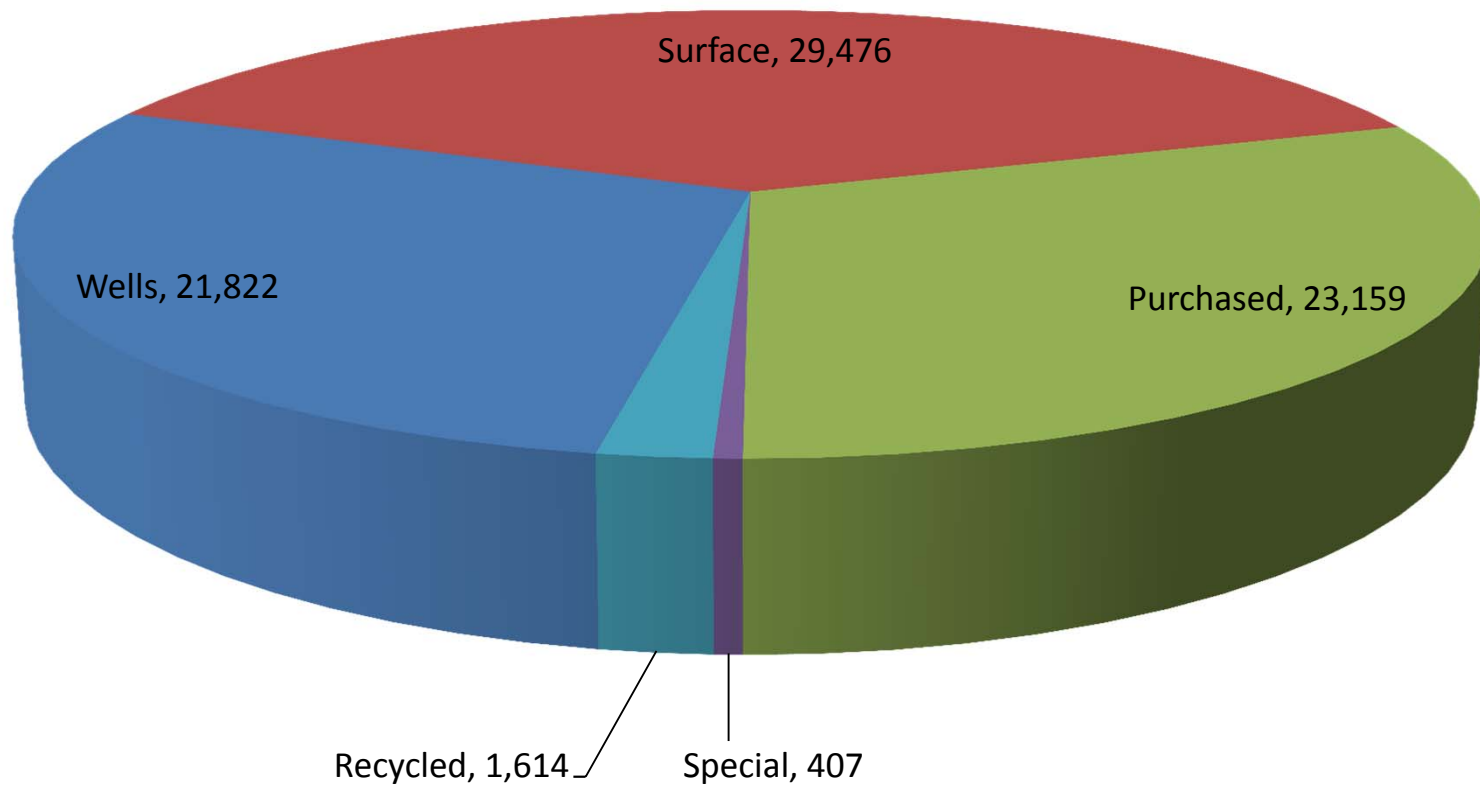

These forms provide data on population, water sources, water production amounts, water use by customer classes, and average water use per capita. The compilation of this data each year helps water managers better understand the trends of water supply and use within Santa Barbara County.
