*\* Footnotes - - to Water Rates in Santa Barbara County; January 2013:*

A “**Uniform Rate**” exists when water is priced at one single rate (dollars per hundred cubic feet, HCF) for all water used.

A “**Block Rate**” exists when water is priced at a different rate (\$/HCF) for each volume or “block” of water used, with rates increasing with each higher volume. A customer’s bill will include multiple rates if multiple blocks of water are used.

A “**Flat Rate**” exists when the charge is the same regardless of the amount of water used. “**Flat plus uniform**” describes a standard charge up to a specified volume of use, plus a charge per unit for each additional unit of water used.

**Carpinteria Valley WD’s** water rate structure uses a unique customer-specific, usage-based block rate for all residential, commercial, industrial, and public authority accounts. The first block (Base tier) is the customer’s *5-year December-through-March average monthly consumption*. (There is a minimum Base of 6 HCF.) The second block (Mid level tier) is an amount equal to 100% of the Base tier amount. Any water consumption above the second block falls into the Peak block. Capital Improvement Program charges (\$2.70/HCF with minimum \$16.20 charge) are based on the customer’s *5-year monthly average consumption*. CVWD also offers low income residents a “lifeline rate”, a 20% reduction in the service portion of the bill.

**La Cumbre Mutual Water Company’s** bi-monthly meter charge is \$30.00 if annual usage is greater than 99hcf. If annual usage is less than or equal to 49 hcf, the bi-monthly charge is \$10.00; if annual usage is 50 to 99 hcf, the bi-monthly charge is \$20.00.

La Cumbre’s bi-monthly land charge is \$29 per acre calculated to each one thousandth of an acre. For the cost comparison table below, the calculation assumes the parcel is ¼ acre in order to be similar to residential properties in other areas.

**Golden State Water Company**, as a private water company, is regulated by the California Public Utilities Commission (CPUC) which has assigned certain surcharges, credits, and fees that are in addition to the normal water rate and meter charges.

**Goleta Water District’s** GWC-ag refers to the Goleta West Conduit System agricultural rates.

Charges for commercial accounts with **La Cumbre Mutual Water Company, Montecito Water District, Carpinteria Valley Water District, and the City of Santa Barbara** are calculated using a ‘base’ or ‘tiered’ amount of water usage per time period, which varies by district.

[ *Information was compiled by Santa Barbara County Water Agency in February 2013. Phone contact is (805)-568-3545. ]*

**Example Comparison of Residential Water Charges**  
**For 10 HCF and 20 HCF Monthly Water Usage (January 2013)**  
(For Single Family Residential Rates; for a 5/8 x 3/4 in. meter; on a 1/4 acre parcel)

<b>*Footnotes</b>	<p>Some bills may include additional taxes or one-time charges.</p> <p>Carpinteria charges are customized to each account. The two Carpinteria example calculations in this table use a monthly mean of 12 hcf and a winter mean water use of 9 hcf for SFR customers for the last 5 years. See footnotes on page 4.</p> <p>La Cumbre's calculation assumes the property is 1/4 acre - - to compare with typical residential property in other areas.</p> <p>One hundred cubic feet (HCF) = 748 gallons; 10 HCF = 7,480 gals.</p>
